LONG-LINE RIG

LONG-LINE RIG

Our custom-designed long-line rig suspends the Shotover K1 or F1 systems below the helicopter to put the camera into hard-to-access areas. This tool is ideal for work over fields or water, where either helicopter or drone downwash would be a disruption. Available for setup in 50-, 100- and 150-foot cable lengths, the long-line also supports the Hydra multi-camera array.
